Each Fan has been provided with a Hydraulic Adjustment Device assembly (HAD) which assists in blade pitch operation of the fan. Hydraulic Adjustment Device is very critical spare and performance of the same is directly linked with operation of the fan vis-à-vis unit generation. Reliable operation of HAD is highly important and hence the same is required to be serviced from OEM experts.The HAD Assembly of FD fan#7B failed on 31st March, 2023 and was replaced from serviced one which was available at site. Presently there is no stock in hand of this material and this failed HAD is required to be refurbished at the earliest as unavailability of HAD will lead to unavailability of fan if any problem occurs in any HAD of running fans. Unavailability of fan will force to run the unit on partial load which will result in generation loss which is not desirable.</p> <p>These HADs are very intricate and critical in design and hence we do not have requisite departmental expertise to service such type of equipment at site. Moreover, these devices after servicing are required to be tested for static &amp; dynamic conditions in Test Beds for their performance and calibration. The requisite facility are not available at plant level.</p>	MT/O&M/QSF-05-07-02/23-24/GEMC-511687754027744/AA (065)/364 Dated 26/12/2023	7,62,711.86	3.3(a) of DFP C&M.	----
